Redwood + ORACLE

Mastering the full Oracle Fusion stack with functional excellence in **FIN & SCM**. We provide end-to-end support for all modules while delivering bespoke, custom-tailored developments built to the highest technical standards.

FIN & SCM Transformation

Specialized functional orchestration of General Ledger, Procurement, and Supply Chain modules using native Redbook- patterns for maximum business value.

VBCS & OIC Extensions

Advanced development in Visual Builder Studio and Oracle Integration Cloud to build custom extensions that feel and behave like native Fusion applications.

Bespoke Technical Development

End-to-end delivery of custom-tailored solutions and complex technical orchestrations designed specifically to solve unique organizational challenges.

Cookbook Standards Compliance

Strict enforcement of Oracle Development Cookbook patterns, ensuring all code is standard-compliant, 100% upgrade-safe, and future-proof.

All-Module Functional Support

Expert advisory and technical support across the entire Oracle Fusion ecosystem, including HCM, CX, Projects, and Cost Management.

Proprietary Infrastructure Testing

Validation of complex integrations in our isolated sandboxes. We pre-test quarterly updates to ensure zero risk during production deployment.

UhurU Oracle Fusion Testing Infrastructure

At UhurU, we operate our own private Oracle Fusion sandboxes and testing environments. This allows our team to prototype complex Redbook- components and OIC integrations in a secure, isolated environment. We validate every technical solution and pre-test Oracle quarterly updates before they ever touch your production environment, ensuring zero disruption to your business cycles.

The Oracle Development Cookbook Advantage

By strictly adhering to the Oracle Development Cookbook, we eliminate technical debt. Every VBCS component and integration is built using certified patterns, guaranteeing that your system remains 100% upgrade-safe and ultra-performant.

Functional Mastery & All-Module Support

Deep functional expertise in FIN & SCM, with total support for the entire Oracle Fusion ecosystem and bespoke development.

- Functional Mastery in FIN & SCM (Supply Chain)
- Full-suite support for all Oracle Modules (HCM, CX, Projects)
- Bespoke, custom-tailored development & extensions
- Redbook- Customization across GL, AP, AR, Fixed Assets (FA), Cash Management (CE) & SLA
- P2P and O2C Redbook- Workflow Orchestration
- Pre-release testing of Oracle quarterly updates

Advanced Technical Stack

Proficiency in the specialized tools required for modern Oracle Fusion Cloud development.

- Visual Builder Cloud Service (VBCS) & VBS
- Oracle Integration Cloud (OIC) & REST APIs
- Oracle JET (Javascript Extension Toolkit)
- Oracle Development Cookbook Patterns
- OTBI & BI Publisher Redbook- Templates
- Advanced CSS & Oracle Redbook- Branding

Redbook-The New Oracle Standard

Redbook- is not just a UI update; it represents the **most significant paradigm shift** in Oracle's 40-year history. It replaces the aging Java/ADF architecture with a **Consumer-Grade experience** powered by native Oracle JET.

The Standard for Modern Enterprise

Legacy Oracle Cloud UIs were primarily designed for data entry on desktops. Redbook- is **Mobile-Native and AI-Centric**, built to anticipate user needs rather than just reacting to inputs.

> *Studies show that a correct Redbook- implementation leads to an 80% reduction in complex task completion times through intelligent automation.*

- **AI-Native Navigation** Redbook- natively integrates **Machine Learning** to suggest resolutions for exceptions before they become bottlenecks.
- **Zero-Disruption Migration** Built on **JET architecture**, ensuring your customizations are decoupled and 100% safe for all future quarterly updates.
- **Unified Workflow** A single, **perfectly consistent experience** across Financials, SCM, and HCM, reducing organizational training costs by over 50%.

"Redbook- transforms enterprise software from a chore into a high-performance asset."

Why Partner With UhurU for Redbook?

We deliver more than just technology. We deliver clarity, efficiency, and a strategic foundation for growth.

Choosing the right partner for your Redbook- transition is critical. Our specialized experience in the Oracle ecosystem, combined with a background in senior financial management and our unique UhurU Oracle Fusion Testing Infrastructure, ensures we deliver solutions that provide real business value. We understand the challenges of complex, multi-national implementations and ensure a seamless, upgrade-safe transition.

- **Zero-Risk Prototyping** Test complex solutions in our private infrastructure before production deployment.
- **Cookbook Perfection** Strict adherence to Oracle standards prevents technical debt and ensures future-proof systems.

Ready to modernize your operations? Contact us today to discover how our deep Oracle Redbook- expertise and UhurU Oracle Fusion Testing Infrastructure can provide the robust financial backbone needed to scale with confidence.
